SUMMARY

Informatics Engineering student at Politeknik Negeri Batam with GPA 3.90/4.00 (Cum Laude, Semesters 1–3). Proficient in full-stack web development (Laravel, Django, Next.js) and embedded IoT systems (Arduino, ESP32), with hands-on experience in REST API development, database design (MySQL), and hardware-software integration. Appointed Project Leader for 4 consecutive semesters, consistently leading teams through the complete SDLC — from requirement analysis, use case modeling, SRS/SKPL authoring, and system design to implementation, functional testing, test case design, bug logging, technical documentation, and production deployment. Demonstrates meticulous attention to detail, structured analytical thinking, effective bilingual communication, and a strong commitment to delivering reliable, impactful digital solutions.

EDUCATION

Politeknik Negeri Batam – D3 Teknik Informatika

Sept. 2024 – Present

GPA: 3.90/4.00 (Cum Laude) | Current Semester: 4 | Batam, Indonesia

- Coursework: Web Programming, Database Management, OOP, IoT Systems, Software Engineering, System Analysis & Modeling, Human-Computer Interaction, Agile Project Innovation, Advanced Software Engineering

PROJECT EXPERIENCE

Smart IoT Attendance System (RFID & Fingerprint)

Sem 4 –2026

PHP, Laravel, Arduino IDE, RFID Module, Fingerprint Sensor, MySQL

- Led team as Project Leader; architected full-stack Laravel dashboard + Arduino hardware integration for automated RFID/fingerprint attendance with real-time REST API sync.
- Designed MySQL schema for attendance logs, user roles, and hardware sessions; conducted functional testing, authored test cases, and managed bug tracking through delivery.

Smart Solar-Powered Aquaponic System

Sem 3 –2025

Next.js, Arduino IDE, ESP32/ESP8266, Solar Panel Integration

- Led IoT aquaponic system combining solar energy with automated fish-feeding, water & pH monitoring, and plant nutrition control; built Next.js real-time dashboard with ESP32 via WebSocket/REST.
- Authored SRS documentation, drew system flowcharts (draw.io), and performed output quality evaluation; implemented solar power management logic across hardware components.
- Coordinated cross-functional team meetings, tracked task completion, and delivered the full system — hardware + software — within the academic semester timeline.

E-Commerce Platform for Furniture (Microservices Architecture)

Sem 2 –2025

PHP, Laravel (Frontend), Python, Django REST Framework (Backend), MySQL

- Designed & led decoupled e-commerce app — Laravel UI layer + Django REST API backend — with product catalogue, cart, order management, and role-based access control.
- Defined clean API contract enabling independent deployment; applied Agile workflow with structured task coordination, use case modeling, and on-schedule delivery.

Tourism Destination Guide Application

Sem 1 –2024

PHP, Laravel, MySQL, Blade Templates

- Delivered full-stack tourism platform as inaugural Project Leader: admin CMS, interactive destination listings, user reviews & ratings, built using full Waterfall SDLC workflow.
- Authored complete technical documentation including SRS, flowcharts, and user manual; conducted end-to-end functional testing and bug resolution before final deployment.

TECHNICAL & ANALYTICAL SKILLS

Languages: Indonesian (Native), English (Intermediate)

Programming: Python, PHP, JavaScript, C++ (Arduino), SQL (MySQL), HTML/CSS

Frameworks: Laravel, Django REST Framework, Next.js, React, Tailwind CSS

Hardware/IoT: Arduino IDE, ESP32/ESP8266, RFID, Fingerprint Sensor, Solar Panel

Systems Analysis: SDLC (Agile/Waterfall), Use Case Diagrams & Scenarios, SRS/SKPL Authoring, Flowcharting (draw.io)

Testing & Docs: Functional Testing, Test Case Design, Bug Logging & Tracking, Technical Writing, User Manuals, DB Normalization

Tools: Git, GitHub, Postman, REST API, VS Code, API Integration, Webhooks

Soft Skills: Team Leadership (4 semesters), Analytical Thinking, Bilingual Communication, Attention to Detail, Project Management, Time Management
